CDE 1.0 (Motif 1.2.4)
Netscape Enterprise Server

Notes:

- 1) EP7 will require access to the SGI SQS Rel A machine that is currently part of the infrastructure configuration.
- 2) EP7 will require access to the HP K200 machine (otis) that is also part of the infrastructure configuration for their Sybase server (sybase 11) and Replication server. EP7 will also require access to "milo" as the Sybase 10 Server. All machines should be configured as Sybase 10 clients.
- 3) EP7 requires 2 Sun machines for load distribution.
- 4) In addition all Machines should be configured as a:
 - Clearcase Client
 - DCE Client 1.03
- 5) DCE Server for Rel B cell is "baltic" (DCE 1.1)
- 6) Clearcase Server for Rel B cell is "krypton"?
